

Watchman

Respond to light-fingers with the flick of a wrist

Prevent customer theft more effectively

by receiving real-time notifications of alarms and suspicious activity; anytime, anywhere on the shopfloor

A notification specifies a location and visually identifies one or more suspects with a picture

When a notification is received, a user simply glances at his / her wearable device to quickly determine where to go and who to look for

Once responded to, the user can reply to the notification (by specifying an 'outcome') for reporting purposes

Key benefits...

Standalone: connect directly to alarm sources (such as Electronic Article Surveillance) and Video Analytics

Integrated: connect to an entire analog CCTV or digital IP surveillance system via the Podium (or Pod) solution

Effortless: features a glanceable UI which is operated with simple taps and swipes

Choice: a range of wearable devices and straps are available

Great support: contact the Company's founder with questions and issues
