# **Peter McCarthy**

Address: Lancashire, UK

Email: peter.mccarthy.0807@googlemail.com

# **Principal Engineer**

I have many years experience in designing and developing software and systems. I have built a diverse range of full-stack solutions for Cloud (AWS), Desktop (Windows, Linux), Mobile (Android, iOS, iPadOS), Wearable (Android Wear, watchOS) and IoT, using a wide variety of runtimes, languages, frameworks, models (AI), databases and tools. I also have experience in leading developers and managing projects, and have started and run my own small business.

Currently, I am researching and developing in technology areas such as agentic AI and MR / VR.

I am someone who can think differently and solve problems in innovative ways. I am very creative, love to build things, have a flair for design, and possess great attention to detail. Also, I am self-motivated and self-taught, hard-working, trustworthy, and am constantly striving to improve myself.

# Skills

# Languages

# **Application**

- C/C++
- C#
- Java / Kotlin (Android)
- Swift
- JavaScript ES6 ES2021
- TypeScript
- Python

#### Presentation

- HTML5
- CSS3

#### Query

- T-SQL
- XPath

# Frameworks, Libraries & APIs

#### Frameworks / Libraries

- COM / ActiveX
- .NET (Framework, Core)
- ASP.NET (Web API 2, SignalR)
- Core Bluetooth, Nearby Interaction (iOS / iPadOS / watchOS / tvOS)
- Qt 5
- React.js
- React Native
- Angular
- jQuery / jQueryUI

#### Libraries (C / C++)

- FFmpeg (video)
- libyuv (graphics)
- LVGL (embedded graphics)
- SDL (multimedia)
- LIVE555 (RTSP)
- ZeroMQ (messaging)
- libusb (USB connectivity)

# APIs (C / C++)

- POSIX (Linux)
- Win16 / Win32, WinRT (Windows)

# Platforms & Runtimes

### **Platforms**

#### PC

• Windows 3.1 - 11

# ΑI

### **Open Source Models**

- **Llama** (language)
- Mistral (language)
- Vicuna (language)

- Stable Diffusion (image generation)
- SAM (image / video segmentation)
- LLaVA (vision)
- Whisper (speech)

#### Libraries / APIs

- Pytorch
- Transformers (Hugging Face)

# Data

#### **Databases**

- SQL Server 6.5 2005
- PostgreSQL
- MySQL
- SQLite
- Access 7.0 2002
- Berkeley DB
- DynamoDB

#### **Formats**

- JSON (including JSON Schema)
- XML (including DTD)
- CSV

# **User Interface**

# PC

- GDI / WinForms / WPF (Windows)
- UWP (Windows)

#### Mobile

- Material (Android)
- SwiftUI (iOS / iPadOS / watchOS)
- React Native (Android, iOS)

#### Web

- HTML5
- CSS3JavaScript ES6 ES2021
- PWA
- Chrome Extension

### Communications

# **Protocols**

- Serial (RS-232 / 422 / 485)
- UDP, TCP/IP (Sockets)
- HTTP
- WS (Web Sockets)RTSP

### Messaging

- Linux (Ubuntu 18.04 22.04)
- ChromeOS
- macOS Sonoma

#### Mobile

- Android Jelly Bean 10
- iOS 17.5 / iPadOS 17.5

#### Wearable

- Android Wear 2.0
- Apple Watch 9 (watchOS 10.5)

#### SBC

Raspberry Pi (1 - 4; Zero 2 W)

#### loT

- Monnit (sensors)
- Disruptive Technologies (sensors)
- Particle Photon

#### Cloud

- AWS: EC2, Lambda, S3
- Hugging Face Hub

#### Containerization

Docker

#### **Runtimes**

- Node.is 0.10.x 20.x
- .NET (Framework 1.0 4.8, Core 1.0 -3.0, 8.0)
- Java (Android, J2ME, SE)
- Swift
- Web Assembly (WASM)

### **Tools**

# **Development**

#### IDE

- Android Studio
- Visual Studio (Professional, Code)
- Xcode
- Swift Playgrounds
- Chrome / Firefox (JavaScript debugging)
- Code::Blocks

- ZeroMQ
- MQTT

#### **Wireless**

- Wi-Fi
- Bluetooth (GATT, L2CAP)
- UWB (Apple U2)
- RFID (Texas Instruments TIRIS)
- IR

#### Wired

- RS-232 / RS-422 / RS-485
- Digital I/O
- USB

#### Qt Creator

# **Compilers**

- gcc
- Emscripten

#### **Editors**

Notepad++

#### **Source Control**

- Git (GitHub)
- Visual SourceSafe

#### **Command Line**

- bash (cp, mv, rm, grep, etc.)
- curl / wget
- ssh / scp
- npm
- git

### **Productivity**

- Google Workspace (Docs, Sheets, Slides)
- Office 365 (Word, Excel, PowerPoint)
- Inkscape
- GIMP

# **Programming Models**

- Asynchronous (promises, async / await)
- Multithreaded (mutexes, semaphores)
- Multiprocess (message queues)
- Concurrency (threads)
- Parallelism (actors)

# **API Design & Implementation**

# **Shared Library**

- SO (Linux)
- DLL (Windows)

#### Network

- HTTP (REST, SSE)
- TCP/IP (Sockets)

# Career

# April 2021-present: Promethean Limited

After leaving Nationwide Produce to pursue new challenges, I joined Promethean Limited <a href="https://www.prometheanworld.com/qb/">https://www.prometheanworld.com/qb/</a>.

#### Role

• **Principal Engineer** (2023-present). In this role, I continue to research emerging and existing software (and occasionally hardware) technologies for future products, and develop proof-of-concepts for demonstration (to senior management) and hand-over (to development teams).

A large percentage of the work I have undertaken so far is in the field of **AI**, particularly Large Language Models (text generation) and Diffusion Models (images generation). I am also working with Apple mobile and wearable technologies; investigating how - for example - Ultra-wideband (UWB) can

be utilised for spatial computing applications.

As a Principal, my work has influence on the direction of product development

• Senior Software Engineer (2021-2023). In this role, I researched emerging and existing software (and occasionally hardware) technologies for future products, and developed proof-of-concepts for demonstration and hand-over

# **Technologies**

- Platforms: Windows, Linux, Chrome OS, Android, iOS / iPadOS / watchOS / tvOS
- Tools: Visual Studio (Professional, Code), Android Studio, Xcode, Swift Playgrounds; Qt Creator
- Languages: C / C++, C#, Java (Android), Swift, Python, JavaScript ES2021
- Open Source
  - Al APIs; Hugging Face Transformers and Diffusers, OpenCV
  - Al Models; Vicuna 13B, LLaMA, Llama 2, Mistral 7B, SD 1.4-2.1, SDXL (Turbo), ControlNet, SAM, LLaVA 1.5, Whisper
  - Libraries; libusb, FFmpeg (libavcodec), libyuv, SDL2
- Frameworks: React.js (JavaScript), Core Bluetooth and Nearby Interaction (Swift); Qt 5
- Frontend: Web (HTML5, CSS3, JavaScript ES2021, WASM); Android (Material); SwiftUI
- Backend: Node.js, Python
- Communications: HTTP (REST, SSE), WS (Web Sockets), USB (Bulk Transfer), Bluetooth (GATT, L2CAP); UWB
- Cloud: AWS, Hugging Face Hub, Telegram

# 2018-2021: Nationwide Produce PLC

After closing-down Bibbol Ltd, I joined Nationwide Produce PLC https://www.nationwideproduce.com.

#### Role

• (Full-stack) Software Developer

### **Project Highlights**

- I designed and developed a number of **mobile-driven solutions** to support the operation of the business in key areas such as product sales, quality control, warehouse picking and stock control
  - At the **frontend**, the systems are written in Java (Android), React Native (Android, iOS), React.js, vanilla HTML / CSS / JavaScript, and C# (WinForms)
  - At the backend, the service-oriented systems are written in C#, using ASP.NET Core utilising Web API 2 (for REST) and SignalR (for real-time). SQL Server and T-SQL (sprocs, views, functions) are used to store and query data
- As well as designing and developing, I provided out-of-hours support for the systems if required. I also authored technical specifications and user guides

# 2008-2018: Bibbol Ltd

After self-employment, I decided to return to the field of retail Loss Prevention & Security, and I founded Bibbol I td.

#### Roles

- Founder / Director
- Software Developer

# **Project Highlights**

- **Watchman**. A wearable solution for receiving instant (text and photo) notifications triggered by alarms and suspicious activity
  - Comprised server software written in JavaScript (with a HTML / CSS configuration Web UI), running on Node.js, installed on a Raspberry Pi 3 Model B device. SQLite was used to store notification data
  - Comprised client software written in Java, running on multiple Android Wear 2.0 smartwatch devices
  - Client-server communication was performed via ZeroMQ and HTTP (REST), and data was exchanged using JSON
  - I conceived, designed and developed the solution. I also demonstrated the solution to Sainsbury's, and later forged a partnership with a global tagging business to supply the solution with their own Electronic Article Surveillance (EAS) solutions. Subsequently, the partner demonstrated the solution to a number of UK, European and US retailers
- Podium. A mobile solution for controlling a retailer's CCTV system
  - Comprised server software written in C (with a HTML / CSS configuration Web UI), installed on a Raspberry Pi 2 / 3 Model B device
  - Comprised client software written in Java and C / C++, running on an Android Jelly Bean / Kit Kat tablet device. To receive, store and render live video, heavy use was made of the FFmpeg and LIVE555 libraries (via Android NDK)
  - Client-server communication was performed via ZeroMQ and HTTP (REST), and data was exchanged using XML and JSON
  - I conceived, designed and developed the solution. I also demonstrated the solution to Asda, Sainsbury's and Matalan, with interest shown from Next, TK Maxx and One Stop. Furthermore, I forged a partnership with a global tagging business to supply the solution with their own Electronic Article Surveillance (EAS) solutions
- **Bespoke**. I was also been involved with designing and developing a small number of bespoke solutions for other businesses, including:
  - loT in Retail. A proof-of-concept for integrating Disruptive Technologies' sensor cloud solution <a href="https://www.disruptive-technologies.com">https://www.disruptive-technologies.com</a> with the cloud solution of a global tagging business. It comprised server software written in JavaScript, running on Node.js, installed on a Linux VM in Microsoft Azure cloud. It also comprised client software written using Ionic and Angular, running on multiple mobile (Android and iOS) devices. A combination of HTTP (REST) and Socket.io was used for client-server communications. (Cloud) servers communicated using HTTP (REST, SSE)

# 2002-2008: ingeniosys

I left Gratte Brothers Security Management Ltd to pursue new career challenges, and worked as a self-employed individual (ingeniosys) while helping to raise a young family.

#### **Roles**

- Owner
- Software Developer

### **Project Highlights**

- On-line Shopping. I designed and developed, from scratch, a complete online shopping system for the sale of fresh meat and delicatessen produce. This was written in C# and ASP.NET and made use of Microsoft Web Service Enhancements (WSE) 3.0 for secure SOAP communications
- **Websites**. I designed and developed a small number of websites, during which I improved my skills in HTML, CSS, JavaScript, and PHP (with Server Side Includes)
- Mobile Gaming. Some 5 years before the iPhone and the App Store, I developed a small number of games for Nokia and Sony mobile phones. These were written in Java (running on J2ME) and were uploaded to a number of app stores for OTA distribution

# 2000-2002: Gratte Brothers Security Management Ltd

I joined Gratte Brothers Security Management Ltd after its acquisition of Secure Solutions Ltd's development team and systems technology.

#### Roles

Development Manager

# **Project Highlights**

- **Sentinel**. On acquisition, the TIGRIS system was renamed to Sentinel and then customised for use in Tesco stores only. I helped to extend the system's functionality, using .NET and C#, which was rolled-out to over 600 stores. The system is still in operation in many stores today
- PnP for CCTV. Before the advent of IP cameras, I worked with Tesco and JVC to create a Plug and Play (PnP) protocol specification for serial communications (RS-422 / RS-485) for CCTV cameras. The specification included protocols for camera discovery and control (pan / tilt / zoom / focus), and was successfully implemented by JVC (with other manufacturers, such as Pelco, considering its implementation)

# 1991-2000: Secure Solutions Ltd

I joined Secure Solutions Ltd shortly after graduating from the University of Liverpool.

### Roles

- Software Developer
- Systems Architect
- Development Manager

### **Project Highlights**

- RACE (Reactive Audit Capture and Evaluation). A retail Loss Prevention & Security system that
  provided CCTV camera control, Point of Sale (PoS) checkout monitoring, and cash-room monitoring
  - Ran on MS-DOS 5.0
  - Written in C
  - Serial (RS-232 / RS-485) networking

- Piloted in 3 Tesco stores
- I helped to develop the system, from scratch, with one other software developer and a hardware engineer. I was also involved with supporting the system (telephone and remote desktop)
- TIGRIS (Totally Integrated Graphical Retail Information System). A retail Loss Prevention & Security system
  - Ran on Windows 3.1 XP
  - Written in C, C++, VB6 and HTML / CSS / JavaScript
  - Serial (RS-232 / RS-485), UDP / TCP/IP and RFID networking
  - Comprised the following configurable modules:
    - Control; provided control of CCTV cameras
    - PoS; monitored Point of Sale checkouts for possible incidents of employee theft
    - TrolleyTrak; tracked the movement of trolleys (via Texas Instruments' TIRIS RFID technology) to detect possible incidents of customer walk-out theft (i.e. leaving a store without paying)
    - Queue Management; combined PoS and TrolleyTrak to predict customer queues and alert checkout supervisors (via pagers) in advance
    - ANPR; monitored vehicle license plates at petrol filling stations
    - **Incident Database**; provided a customer theft reporting tool
  - TIGRIS TrolleyTrak was piloted in 11 Morrisons stores
  - TIGRIS Queue Management was piloted in 1 Tesco store
  - TIGRIS Control and PoS was piloted in a small number of Asda and Safeway stores
  - TIGRIS Control, PoS, ANPR and Incident Database, was rolled-out into over 300 Tesco stores
  - I helped to architect and develop the system, from scratch, with other software developers and hardware engineers. I was also involved in supporting the system (pager / telephone and remote desktop). I later became responsible for the development team and assumed the role of Development Manager
- Hardware. I was involved in the design, manufacture and system integration of a small number of in-house developed RACE / TIGRIS hardware devices (such as CCTV camera control joysticks and PoS interface units)

# Education

# 1988-1991: University of Liverpool

• BSc (Hons) 2:1 Computer Science

1986-1988: St John Rigby RC 6th Form College, Orrell

- 'A' Level Grade **B** Computer Science
- 'A' Level Grade **C** Art (practical and history)
- 'A' Level Grade **D** Mathematics

# 1981-1986: St Thomas More RC High School, Wigan

• 7 'O' Levels (Grade **B** Mathematics, Grade **C** English, Grade **C** Computer Science)

# Personal

- Date of Birth: 8th July 1970
- Marital Status: Married
- Interests: Technology (AI, MR / VR), current affairs, music (rock), podcasts, movies, reading (fiction / non-fiction) and sport (cricket, F1)
- Achievements: I taught myself to code at the age of 13 (C64 BASIC, 6502 assembly). Also, I helped to build a house between the ages of 13 and 16
- Other: I have a full, clean driving licence. I am in excellent health (I take no medication). Also, I am a non-smoker
